No (33-49) Corner of Bank St and Mahabandoola Rd, Kyauktada Township.

Android Developer Coding Test

Overview

An assignment project for Android Developer Interview that will help us to make a more accurate assessment of your skill and quality level.

Deliverable

Please upload the source code as a zip file through gDrive or share with github link.

Duration

72 Hours

Specifications

Your project have to contain the following criteria:

- Programming Language: Kotlin
- Architecture Pattern: MVVM
- Database: Room
- Animations and Transitions
- Screen orientation support (Shouldn't reload the data on screen orientation)

CONFIDENTIAL

STRENGTH OF MYANMAR

Mobile Topup Feature

Task 1 - Automatically detect telecom from mobile number.

Number Prefix Lookup: Using specific telecom numbering plans.

Local Database Matching: Maintaining an updated list of mobile number prefixes for offline detection.

Task 2 - Display denomination and data package from relevant telecom.

User-friendly Display: Presenting available plans in a structured format, allowing users to compare and select the best option.

Task 3 - Display Success, Transaction History and Detailed screens with attractive UI.

Success Screen

Clear Confirmation Message: Display a visually appealing message with a checkmark

Transaction Details: Show amount, plan details, validity, transaction ID, and operator name.

Transaction History Screen

CONFIDENTIAL

List of Past Transactions: Show date, amount, plan details, and status (Success/Pending/Failed) in an organized manner.

Filters and Sorting: Allow users to filter transactions by date range, status or operator.

Search Bar: Enable users to find specific transactions quickly.

Detailed Screen

Telecom Provider Info: Display the **logo and name of the telecom provider** based on the mobile number.

Recharge Button: Provide a prominent **"Proceed to Recharge"** button for quick action.

Task 4 - Store Data in a local database.

Insert transactions into the Room Database after a successful recharge.

Notes

Please try to demonstrate the following:

We hope for attractive UI design and persistence layer implementation for the projects. Use any object-oriented design patterns to solve the above problem design interface protocols.

There may be an online interview after your code submission.
